We successfully launched “Nitric acid” suitable for trace metal analysis for ICP, and more are in the pipeline. Our HPLC range of solvents are produced under controlled conditions to offer one of best in the Industry with stringent specifications. The quality is monitored through our NABL accredited Laboratory with experienced chemists and sophisticated Instruments strictly evaluating complete parameters. This offers our customers a very enriched experience of performing analysis with Finar’s reagents.

In line with our commitment to expand our portfolio of International quality products with high end applications in the Instrumental Analysis domain, we have collaborated with Inorganic Ventures, USA and Mitsubishi Chemicals, Japan for their NIST traceable triple ISO CRMs and Coulometric KF reagents respectively. Our FOOD grade “Fin-SQ” products have further expanded with a range of purified, tested and approved products as per Codex specification from our FSSAI approved plant. We have also expanded our range of Aqua culture products (Antibiotic free) for Safe, Hygienic and Sustainable development of culture for assistance to marine culture farmers. Finar Excipients – through its monograph range, DMF filed products (US & CHINA), specialized and Injectable Excipients and more, have found a pride spot in most Pharma majors and scaling further. These products are produced in our GMP approved and EXCiPACT certified plant.

Finar continually believes in harnessing talent and investing in processes to scale up, modernize and invest in our plant, technology, machinery and people. We distil and purify solvents for high end applications and continue with hyper pace to placate our customers with their specific requirements with speed and consistency. Finar Foundation: An Honest Effort

Dear Friends,

I would like to share with you what I call the “Twin Hearts”. One which we all normally refer to, is our beating heart, and the other is in our brain where our intellect inclines towards the goodness of this beautiful world. When my beating heart connected with the heart in my brain, I realised the importance of my responsibilities towards the society and I surrendered to them.

My own experience to this is Finar foundation. Six years ago, I had not even dreamt that I would put my heart and soul into working for the not-so-fortunate. Today my greatest joy is to sit in line with school kids to have mid-day meals.

We have many fond memories of the work that we have done and we take inspiration from these memories to do much more and positively impact the society.

We engage in around 30 activities to support the society. In the education field, we work closely in over 50 schools with underprivileged children in Ahmedabad district, which impacts more than 20,000 students and 3000 rural families.

Since over a year, we have forayed into childcare where we support children who are between 1 and 6 year of age, through 12 Finar “Anganwadis” (Govt Nursery schools).

We also work with Kasturba Gandhi Balika Vidyalayas which provide shelter & educational facilities to girls of special need..

Our faith in goodness and commitment to work hard for the society is only growing! And this is happening through the blessings and guidance of our Gandhian elders and the efforts of energetic youth who have joined hands together!

Gone are the days of only looking at private joy and safety! It’s time for a change! It’s time for collective consciousness and efforts. We must contribute to a balanced society with real secularism in our hearts!

Join me in our journey to life.

Yours truly,

Girish Maheshwari

Globally Harmonised System

GHS Pictograms and Hazards

The GHS is an acronym for The Globally Harmonized System of Classification and Labeling of Chemicals. The GHS is a system for standardizing and harmonizing the classification and labeling of chemicals. It is a logical and comprehensive approach to:

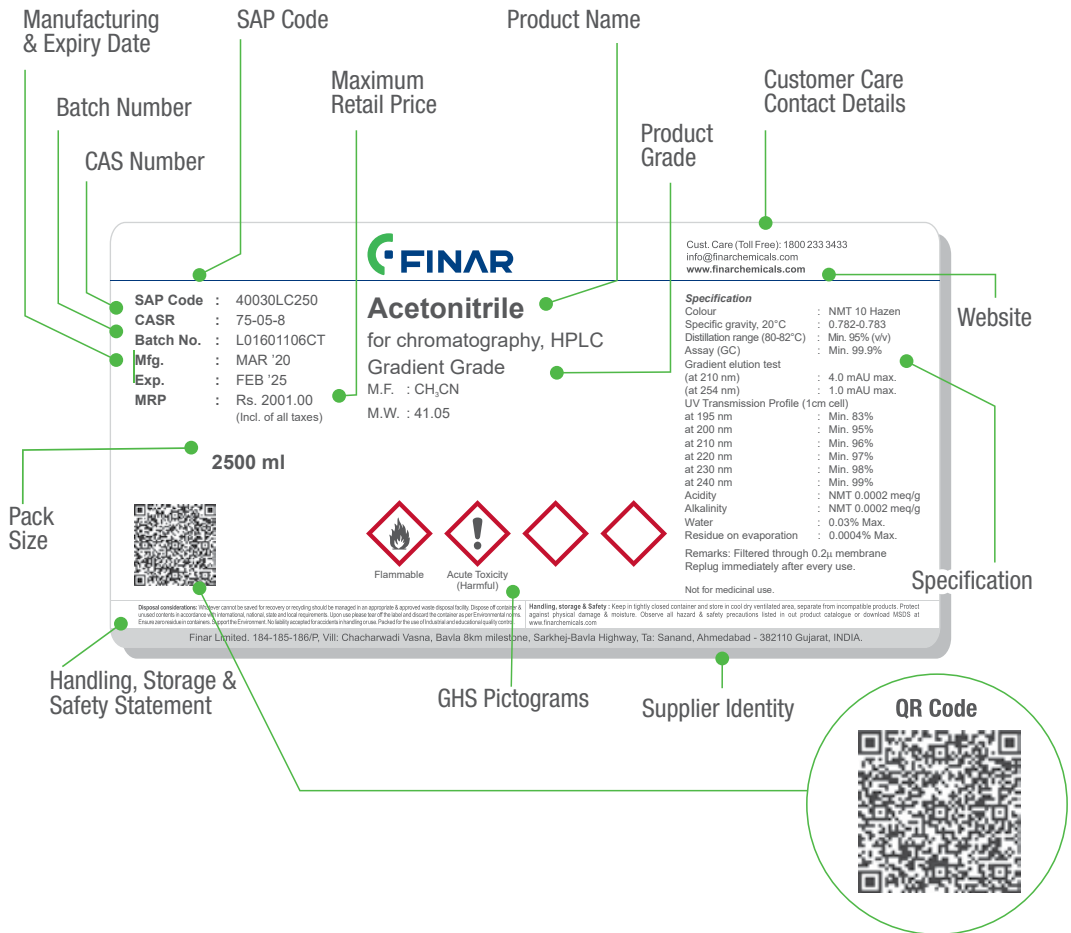

- Defining health, physical and environmental hazards of chemicals
- Creating classification processes that use available data on chemicals for comparison with the defined hazard criteria and
- Communicating hazard information, as well as protective measures, on labels and Material Safety Data Sheets (MSDS).

The hazard communication is made through GHS Pictograms depicted below that indicate the potential hazard of the product.

Label Information

The newly designed labels are visually appealing, offer comprehensive product details, and a special emphasis is on handling, storage and safety information along with the hazard pictograms adhering to GHS Compliance

All Product Labels come affixed with a unique QR code. Users can easily scan the QR code through their handheld device such as a smart-phone or a tablet and instantly obtain the Product COA of that particular batch. All you need is a QR code scanner/reader installed in your device which may be downloaded from the Google Play Store for android devices or Apple Store for IOS devices.

Users are advised to observe the storage, handling & safety instructions mentioned on each label and consider them good for use and guaranteed to perform upto the prescribed shelf life of the product.
